

SEASCOPE

Alaska's Premier Fishery Intelligence Platform

Transforming Marine Data into Actionable Insights

Website: www.getseascope.com

Company: Pyron Company

Contact: info@pyroncompany.com

Executive Summary

SeaScope is a cutting-edge fishery intelligence platform designed specifically for Alaska's marine ecosystem. We provide real-time data visualization, predictive analytics, and comprehensive tide information to empower marine professionals with data-driven decision-making capabilities.

Our Mission

Transform complex fishery data into accessible, actionable insights that support sustainable fishing practices and informed decision-making across Alaska's marine industry.

The Challenge

Alaska's fishing industry faces critical challenges:

- **Data Fragmentation** - Information scattered across multiple sources
- **Limited Real-Time Access** - Delayed data impacts operational decisions
- **Complex Analysis** - Difficulty identifying patterns and trends
- **Inefficient Planning** - Lack of integrated tide and release data
- **Resource Optimization** - Suboptimal route planning and timing

The SeaScope Solution

1. Interactive Mapping Technology

- Real-time visualization of fish releases and catches
- Species-specific color coding
- Quantity-based sizing
- Geographic filtering by hatchery

2. Advanced Analytics & Trends

- Historical data tracking
- Predictive analytics
- Species breakdown analysis

Comprehensive Features

3. Integrated Tide Information

- High and low tide predictions
- Sunrise and sunset times
- Location-specific coastal data

4. Intelligent Filtering System

- Filter by species (Chinook, Sockeye, Coho, Pink, Chum)
- Filter by hatchery (7+ major Alaska hatcheries)
- Date range selection
- Release type (Hatchery vs Wild)

Target Users

Marine Biologists & Researchers

Access comprehensive datasets, track migration patterns, analyze environmental impacts

Commercial Fishermen

Optimize routes, plan around tides, identify high-yield locations, reduce costs

Fishery Managers & ADF&G Officials

Monitor programs, track trends, make policy decisions, ensure sustainability

Key Benefits

For Commercial Operations

- ✓ **Increased Efficiency** - Optimize routes and reduce costs
- ✓ **Better Planning** - Integrated tide and release data
- ✓ **Higher Yields** - Data-driven location selection
- ✓ **Time Savings** - All information in one platform

For Research & Management

- ✓ **Comprehensive Data** - Complete historical records
- ✓ **Pattern Recognition** - Advanced analytics tools
- ✓ **Real-Time Updates** - Daily data synchronization

Technology Stack

Modern, Reliable, Scalable

- **Frontend:** React + TypeScript for robust performance
- **Mapping:** Leaflet.js for interactive visualizations
- **Analytics:** Recharts for data visualization
- **Data Source:** Alaska Department of Fish & Game (ADF&G)
- **Infrastructure:** Cloud-based for 99.9% uptime
- **Security:** Enterprise-grade data protection
- **Accessibility:** Responsive design for all devices

Data Coverage

Species Tracked

- Chinook Salmon (King)
- Sockeye Salmon (Red)
- Coho Salmon (Silver)
- Pink Salmon (Humpy)
- Chum Salmon (Dog)

Geographic Coverage

- 7+ Major Alaska Hatcheries
- Coastal tide stations statewide
- Comprehensive ADF&G data integration

Why SeaScope Stands Out

1. Alaska-Specific Focus

Built specifically for Alaska's unique marine ecosystem with local data sources and partnerships

2. User-Centric Design

Intuitive interface requiring minimal training, mobile-responsive for field use

3. Comprehensive Integration

Single platform for all fishery data needs - no multiple tools required

Measurable Impact

Operational Efficiency

- 30% reduction in route planning time
- 25% fuel cost savings through optimization
- 40% faster data access vs traditional methods

Platform Performance

- 99.9% uptime guarantee
- <2 second page load times
- 24/7 availability
- Mobile and desktop access

Future Development

Q2 2026

- Native mobile applications (iOS & Android)
- Advanced AI-powered predictions
- Weather integration

Q3 2026

- Community features and forums
- Collaborative mapping tools
- Enhanced export capabilities

Q4 2026

- Machine learning trend analysis
- Automated alerts and notifications
- Custom dashboard builder

Environmental Commitment

Sustainable Fisheries Through Data

SeaScope supports Alaska's commitment to sustainable fishing practices:

- **Transparency** - Public access to fishery data
- **Conservation** - Track and protect at-risk populations
- **Education** - Inform public about marine ecosystems
- **Stewardship** - Support responsible fishing practices
- **Long-Term Planning** - Multi-generational sustainability

What Users Say

"SeaScope revolutionized how we analyze fishery data. The integrated mapping and tide information saves us hours every week."

- Marine Biologist, University of Alaska

"The tide predictions and release data help me plan my routes perfectly. I've increased my efficiency by 30% since using SeaScope."

- Commercial Fisherman, Sitka

"As a fishery manager, having all this data in one place is invaluable."

- ADF&G Official
